

◆ ASSESSMENT · SELF-SCORING

Are you ready to ship AI?

A self-scoring readiness assessment across data, use case, team, governance and infrastructure — find the gaps before they find you.

Data

Use case

Team

Governance

Infrastructure

Five dimensions of AI readiness.

Rate each statement 0 (not true) to 2 (fully true). 18+ = ready to build; 10–17 = close, address the gaps; under 10 = start with strategy and data.

- ✓ Data — we have accessible, reasonably clean data for the use case.
- ✓ Data — ownership, permissions and PII handling are understood.
- ✓ Use case — the target outcome is specific and measurable.
- ✓ Use case — a human can cheaply verify the AI's output.
- ✓ Team — someone owns the outcome and can act on findings.
- ✓ Governance — we know what autonomy we will and won't allow.
- ✓ Governance — audit, approval and escalation are agreed up front.
- ✓ Infrastructure — we can integrate with our existing systems.
- ✓ Infrastructure — we can monitor cost, latency and quality.

NEXT STEP

Wherever you scored 0, that's your first work item. Book an architecture review to turn the gaps into a plan.
